How to make vulnerable urbanised deltas safer, smarter and more resilient? In the most densely populated and urbanised region of the Netherlands, entrepreneurs, scientists and (local) governments have formed an alliance to accelerate innovations in deltatechnology and water management. By matching entrepreneurial minds with public challenges and state-of-the-art knowledge the VPdelta programme helps future-proof delta management worldwide.

Safe delta

Urban delta

Smart delta

Creating field labs and showcases

- where entrepreneurs test and develop their prototypes, from sensors and mobile apps to floating structures and temporary flood protection systems.
- where students and researchers run experiments, collect vital data on designs, devices and systems and receive practical training.
- where Dutch innovations are demonstrated and shown to the rest of the world.

Connecting public and private stakeholders

- through interaction between product development and scientific research, training and education.
- by inviting public authorities to adopt and implement new products and services.
- by finding launching customers for innovators.

Accelerating innovation

- by having more than 100 start-ups and SME's benefit from an extensive field lab infrastructure.
- by training innovators' business skills and linking them up with end users at home and abroad.
- by making sure that today's breakthroughs become tomorrow's game changers.

Get in touch!

VPdelta offers smart solutions for climate adaption, flood risk management and sustainable resource management. If you want to find out more about VPdelta and its innovations or if you would like to visit one of the field labs, please contact: info@vpdelta.nl.
